

eWorX Managed Services DataVault

Fully Automated Data Protection and Recovery Service. Whether it's a bi-coastal law firm or a five branch community bank, many of today's companies experience significant difficulty managing their backup and recovery processes. Deciding when and which files to backup, coupled with evaluating and buying all of the accompanying hardware, software and media are among a host of issues facing IT professionals.

- » Optimizing the backup and recovery process without additional capital expenditures.
- » Lacking adequate IT resources to implement, conduct and manage data protection and recovery processes.
- » Trying to alleviate tape and truck aggravations by installing an automated data protection and recovery process.
- » Improving security and adherence to compliance related issues.
- » Struggling with data growth and managing remote locations.

Protection superbly suited for organizations:

How eWorX DataVault Works

Quick and Painless Installation - With phone support from eWorX, the customer's system administrator installs eWorX agent software on each server requiring backup, then sets up their backup retention levels.

Start "Protecting" - It's that simple. In a matter of minutes, the organization is now operating a completely automated, reliable and secure data protection and recovery process.

When Restoration is Needed - Anytime the customer needs to recover a file, directory or an entire server's data image. Simply select the files and directories to be restored, the date and time of the appropriate backup and the destination for the recovered files.

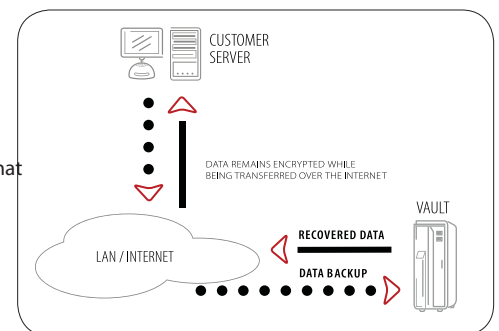

DataVault exceeds the HIPAA, SEC and SARBANES-OXLEY Requirements for Record-Keeping and Storage.

Companies who undertake strategic compliance with these laws (such as using products like DataVault) will realize many other benefits that come from effective management of information and a better understanding of business processes.

On the other hand, failure to comply with these laws can result in civil penalties as well as criminal penalties (fines as high as \$250,000 and 10 years in prison).

Features and Business Benefits

- » Centralized Management
- » Automated Data Protection and Recovery
- » No Hardware or Media Purchase
- » All files formatted in a System Independent Data Format
- » Verifiable backup to secure, offsite location
- » Encrypted, compressed data transfer
- » Multiple System Support
- » Superior Customer Service
